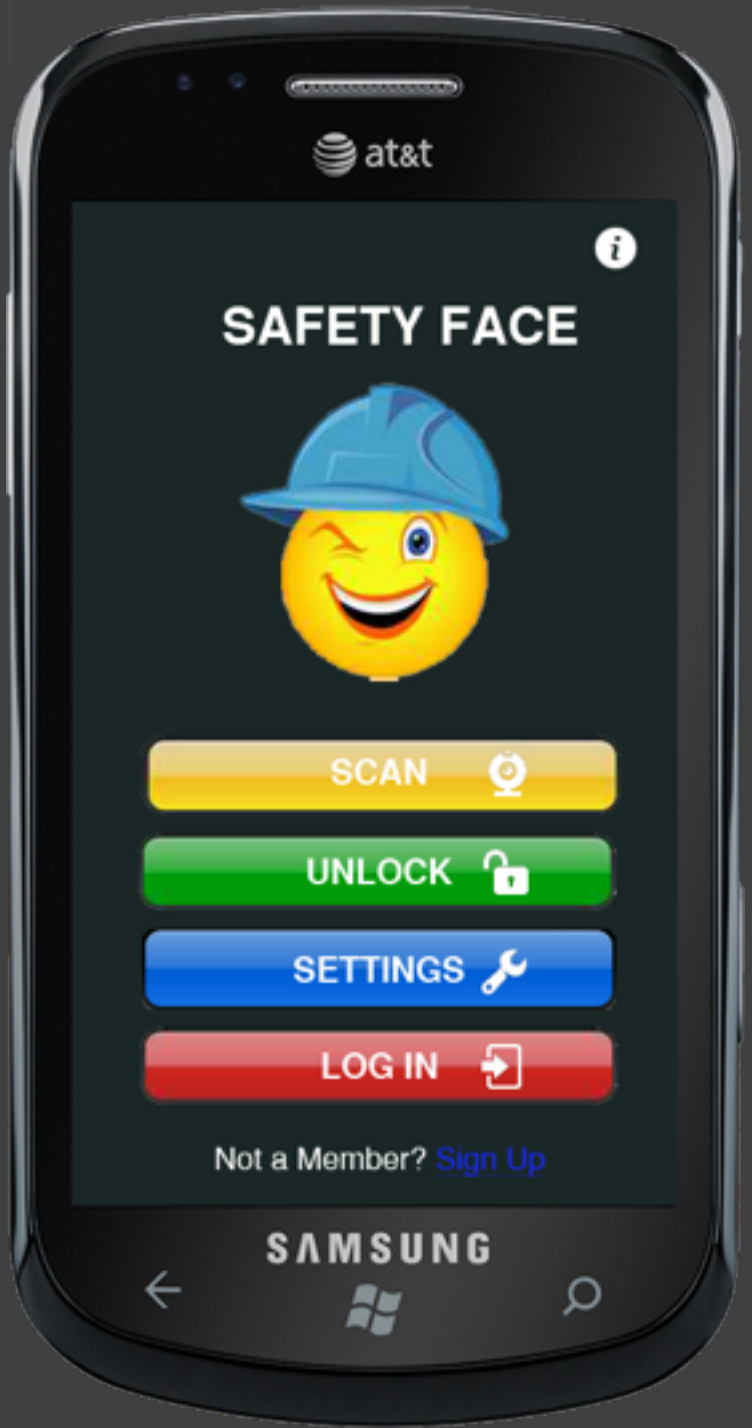
SAFETY FACE

Trust No One No Matter How Pretty

The Problem:

It’s not fun to find your house SMASHED
by unknown renters!



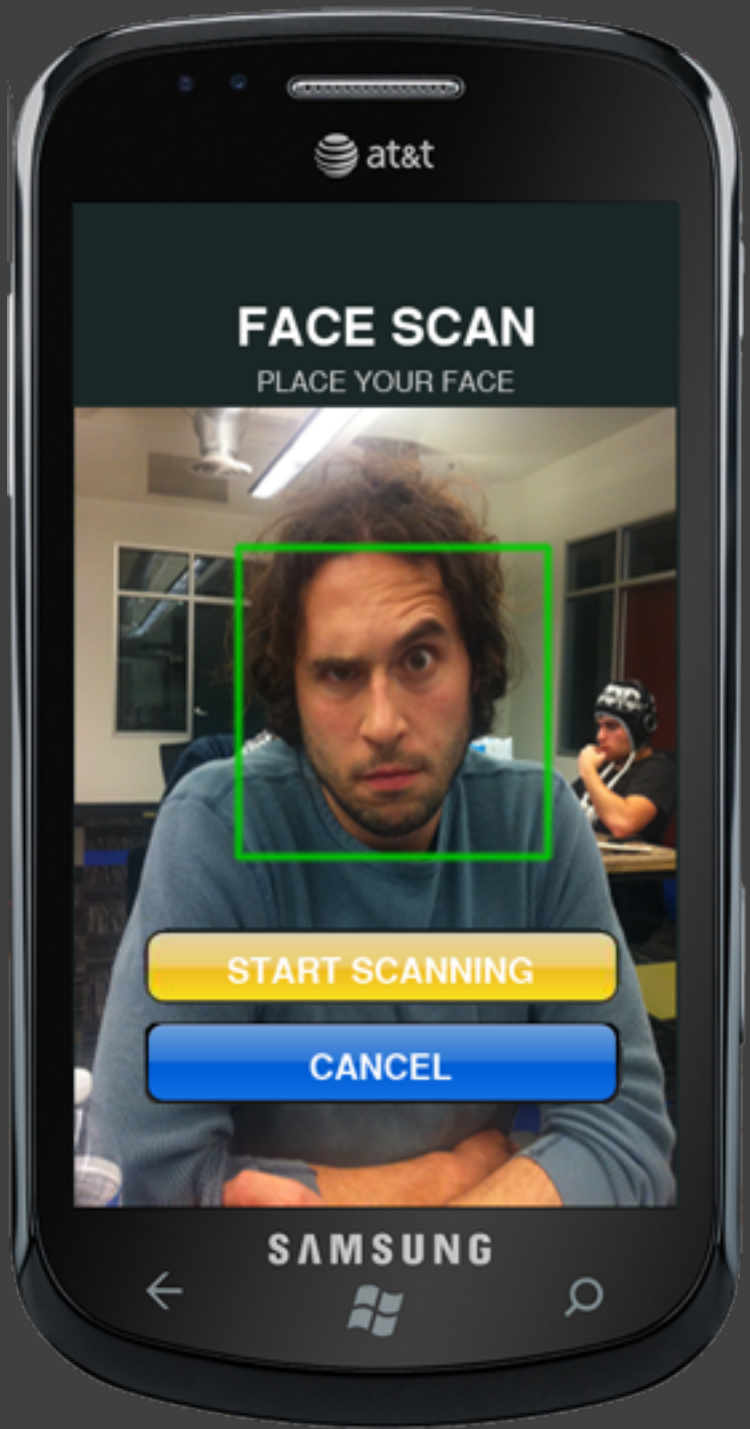
The Solution:
Safety Face

An innovative way to run background checks on potential people living in your home while you are off travelling, or on wayward travellers that rent out your spare guest house.

How It Works:

Using your mobile device you scan a potential renter's face and have it checked against our facial recognition API.

The image is permanently stored in our system, so if something happens we were unable to prevent, you have a record of that person's identity for law enforcement.



See it in action:

How will we make money from it?

:

Service based background checking and providing an API for people to innovate on.

Where We Can Take It:

- Linking it against criminal databases.
- The fastest digital exchange of networking information.
- Provide a background check for new people you need to trust.
- Remotely unlock secure locations, e.g. Lockitron.
